DATES

6-11 JULY, 2026

PRIZE POOL

\$15,000

 Online

Monday, July 6 2026 - 10:00 PM Western Indonesia Time

AMD Developer Hackathon: ACT II

Build AI agents and high-performance AI apps on AMD GPUs in the cloud | Prize Pool \$15,000

To participate in the hackathon, simply click **Sign up with AMD**. If you are not already a member of the **AMD AI Developer Program (ADP)**, you will need to create an account.

ADP members can access AI tutorials, experts, and community support. In addition, **new members can claim** a free month of DeepLearning.ai pro, \$100 in AMD GPU cloud credits, and \$50 in Fireworks AI API credits.

All hackathon participants will receive on hackathon launch additional compute and API credits for their projects.

Ready to build what's next on AMD? **Sign up with AMD below to secure your spot.**

▲ REGISTRATION AND CREDITS NOTICE

Register by **July 2nd** to receive your hackathon credits on day one

Registration stays open after July 2nd, but hackathon credits for late sign-ups will only be allocated from **July 7th** onward.

Sign up by July 2nd

Hackathon credits for Fireworks AI API and access to the AMD Developer Cloud will be available from day one.

Sign up after July 2nd

You can still join, but hackathon compute access and credits will only be allocated from July 7th onward.

i Two types of credits — they are separate

Hackathon credits — All participants will receive **\$50 in Fireworks AI API credits**. More details on AMD Developer Cloud GPU access will be shared once the event starts.

New member credits — \$100 AMD Developer Cloud and \$50 Fireworks AI API credits for new AMD AI Developer Program sign-ups. These follow a separate 2 to 3 day manual approval process and are not affected by the hackathon cutoff date.

About

The **AMD Developer Hackathon: ACT II** is a hands-on event for developers, founders, engineers, and builders who want to push what's possible with AI on real infrastructure.

At the center of it: **AI Agents** - a space to explore intelligent

Approved

13329 ↑

You'll be working with **AMD AI Developer Cloud**, **ROCm**, and **Fireworks AI API**, all fully in the cloud, so you can focus on building instead of setup.

All AMD Developer Program Participants Get

AMD AI Developer Program members unlock cloud credits, training resources, expert access, and opportunities to get their work recognized.

NEW SIGN-UPS ONLY

\$100 AMD Developer Cloud GPU Credits

New AMD AI Developer Program members receive \$100 in cloud credits redeemable on AMD Developer Cloud with powerful AMD GPUs to start building.

NEW SIGN-UPS ONLY

\$50 Fireworks AI API Credits

New AMD AI Developer Program members receive \$50 in Fireworks AI API credits to access models hosted on AMD-hardware to start building right away.

AMD AI Academy

Access AMD AI Academy courses, technical resources, tutorials, documentation, and developer learning content.

NEW SIGN-UPS ONLY

DeepLearning.AI Pro

Get a 1-month complimentary [DeepLearning.AI Pro](#) membership.

Approved

13329 

Connect with AMD engineers and technical experts through member community channels and office hours.

Private Community Access

Get access to community channels, personalized updates, and early registration opportunities for AMD developer events.

Project Recognition

Get opportunities for project recognition, including potential showcase on AMD social channels or at AMD developer events.

Fully Cloud-Based

Everything runs fully in the cloud, so no local hardware setup is required to participate and build.

AMD GPU Cloud Access and Credits

On hackathon start, details for AMD GPU cloud access and credits will be provided. Benefits are provided through the AMD AI Developer Program and may be subject to AMD's terms, eligibility, and availability.

REFERRAL PROGRAM

Refer friends and earn points

Approved

13329 

1 Get approved

Register for the hackathon and wait until your enrollment is approved.

2 Generate your link

Open your dashboard and click "Generate referral link."

3 Share and track

Share your link and track referral activity from your dashboard, live page, or profile.

How points work

Earn **200 points** when someone joins through your link and submits a project. Referred participants can earn **100 points** when they submit.

Minimum threshold to qualify for the referral prizes

You must refer at least **100 approved participants** to be eligible for referral prizes — even if you finish in the top 3 on the leaderboard.

Referral activity appears after invited participants enroll and get approved.

Three tracks. Real AMD hardware. Pick your challenge.

Whether you're shipping your first AI agent or building your next startup, ACT II has a track for you. Build on **AMD Developer Cloud, ROCm, and Fireworks AI API credits.**

All submissions must be containerized.

TRACK 1

Hybrid Token-Efficient Routing Agent

★ Beginner · AI Agent Track

TRACK 2

Video Captioning

📺 Beginner · Prompt and have fun

TRACK 3

Unicorn Track

🦄 All levels · Build your startup

TRACK 1 ★ Beginner Friendly · AI Agent Track

Hybrid Token-Efficient Routing Agent

Build an AI agent that gets the job done using the least tokens possible.

Tasks are revealed at kickoff. Your agent must complete each one autonomously by deciding in real time whether to use a **local model**

Approved

13329 ↑

cheapest option every time, without falling below the accuracy threshold.

Every submission is scored on a **standardized environment**. You can develop and test on any hardware, but final scoring runs on this standardized environment only. Local models must therefore be sized to run within these constraints, so routing intelligence wins, not raw compute power.

All models and tokens used locally count as **zero** toward the final score.

We recommend running a local eval step to check your output quality before submitting.

Want to fine-tune your router? Go for it. Prompt-based and fine-tuned approaches are scored exactly the same way: token count and output accuracy.

Models to be used will be revealed on launch day.

BUILD IDEAS

Model Router / Cost Optimizer

A routing layer that reads each query and instantly picks the cheapest, best-suited model from the available endpoints.

TRACK 2  Beginner Friendly · Have Fun

Video Captioning

Four styles. Endless creativity. Let your humor bone shine.

You'll receive a fixed set of short video clips. Your pipeline must generate a caption or summary for each one in four distinct styles: **formal**, **sarcastic**, **humorous-tech**, and **humorous-non-tech**.

Video clips are strictly **30 seconds to 2 minutes** in length.

Models are accessed via **Fireworks AI API credits**. Fine-tuning is explicitly permitted — you may also train your own captioner and use it alongside or instead of prompting. Use open datasets, build your own, or both. Models to be used will be revealed on launch day.

LEVEL

Beginner

JUDGING

COMPUTE

Fireworks AI API

TRACK 3  All Levels

Unicorn Track

Your idea. AMD infrastructure. No benchmarks, no constraints —

Approved

13329 

Use any open-source models and frameworks alongside **AMD GPUs** and/or **Fireworks AI API credits** to build a product- or startup-oriented project.

There is no fixed performance benchmark. Submissions are not scored on speed, token usage, or accuracy. Judges are looking for **creativity, originality, completeness, use of AMD platforms**, and **product/market potential**. Think startup pitch, not benchmark run.

LEVEL

All skill levels and any tech stack

JUDGING

Creativity, originality, completeness, use of AMD platforms, product/market potential

COMPUTE

AMD GPUs + Fireworks AI API

Technology & Access

Build using **AMD Developer Cloud** with AMD GPUs, **ROCm**, **Fireworks AI API**, and open-source AI frameworks.

Everything runs fully in the cloud, so teams can focus on building, experimenting, benchmarking, and scaling AI workloads without managing infrastructure.

Approved

13329 

AMD Developer Cloud

Judging Criteria

Scoring varies by track. Tracks 1 and 2 are ranked via **leaderboard**. **Track 3 — Unicorn Track** is evaluated by judges using the criteria below.

Tracks 1 and 2

Scored via leaderboard. Refer to the track details for scoring criteria.

[See track details](#)

Approved

13329 

Judged on the criteria below.

Creativity and Originality

The uniqueness and creativity of the solution, highlighting novel approaches and new behaviors.

Product/Market Potential

The startup or product vision — how compelling and viable the idea is in a real market context.

Completeness

How fully realized and functional the submitted project is.

Use of AMD Platforms

How meaningfully AMD infrastructure is incorporated into the project.

Hackathon Details

Everything you need to know before you register and start building.

How to participate

To access credits and be approved for the hackathon, participants must sign up for the [AMD AI Developer Program](#).

The hackathon takes place online on the **lablab.ai** platform. Click the Enroll button on this page to register.
